

CICS COMMAND LEVEL PROGRAMMING

FIVE DAYS

Prerequisite:

This course is intended for those who have programming experience in [COBOL](#).

Who Should Attend?

Application programmers, application analysts, and other data processing personnel involved in development or maintenance of CICS based applications.

Course Description:

CICS Command Level Programming combines lectures and workshops that teach the student the techniques of writing on-line application programs in a mainframe CICS environment. The course emphasizes the practical use of CICS. The principal CICS facilities covered are BMS, terminal control, file control, temporary storage, transient data and program control. Students also learn the techniques of pseudo-conversational programming.

Course Topics:

- Introduction
- Programming Basics
- Basic Mapping Support
- Terminal Control
- File Control
- Program Control
- Temporary Storage and Transient Data
- Interval Control
- Helpful Hints
- Other Commands of Interest
